The Sustainability features are great.

I would like to see the feasibility of a net-zero energy carbor downturn as a model of climate action and climate-resilient.

Great vision averall!!

Oreat vision averall!

I think it is	in very good plan und addresses many of
the issues that &	don't an Dais faces cirrently. Bite &
pedestrians to have	a much higher priority in the doubton core
	have The density of the duntour core the
also needs to be	increased with at least 2-story structures that
	den on the street have and apportments or
offices up above	. This kind of building should next sustainability
and the second s	in commutes within the city & increasing the Lousing stock

DAVIS CALIFORNIA DOWNTOWN SHUTTLE PROPOSAL July 1, 2019

This is an argument for a shuttle to connect the Davis commercial district to adjacent residential districts and UC Davis.

The current planning effort for the Davis Core Area envisions an active multi-dimensional downtown area with more retail, more housing and more activity. The core area is expected to have an enhanced focal point in the E Street Plaza, midway between Central Park and the AMTRAK station. Opticos, the City's planning consultant, has made a strong case for new parking, pedestrian and commercial improvements and for a form-based code structure that offers more flexibility to the City in implementing its goals. Their early analysis of the feasibility of substantial new downtown housing was not promising. In fact, they saw little financial opportunity for new housing apart from outside mandates such as Senate Bill 50, or other unknown inducements.

Fortunately, Downtown Davis will soon have abundant new residents, provided that the City reaches out to them. People in new projects such as Lincoln 40, the Nishi project and the University's Solano Park project, along with existing Olive Drive residents, and UCD staff, will be more than willing to visit downtown Davis, given reasonable access.

DEMAND: All of these areas, comprising almost 5000 adult residents, are separated from the downtown by railroad tracks or the lack of quick access, despite their close proximity. In addition, two noteworthy hotels: the Hyatt Place at UC Davis and the new 132-room conference hotel on Richards have no quick access to downtown. As most of these hotel guests arrive by car, they are just as likely to drive to Sacramento or the Bay Area for outings as to downtown Davis once they are in the car. Olive Drive residents have poor access through the tunnel, and the Lincoln 40 project has parking for only 34% of its residents. All Lincoln 40 residents are to be students, yet reasonable access to campus is not provided.

ROUTE: I propose an automated shuttle to connect all of these areas to downtown Davis by means of a new route, employing a vehicle similar to what one sees at many airports, on a dedicated path. Such as system could connect the Mondavi Center at UCD to the AMTRAK station without crossing any existing roadways and passing mostly over land that is City-owned, University-controlled, or land where public influence can be brought to bear to obtain easements. The attached sketch shows the basic route envisioned. At the west end, the connection to Campus is through a widened undercrossing already to be provided by the Nishi developer. The line would be single-track except for three stations.

VEHICLES: A minimum of six vehicles would be required to provide an end-to-end service on a 20- or 30- minute schedule. Vehicles could be rubber-tired running on a paved surface but never interacting with traffic. Vehicles could be electric, automated with the latest proven technology and perhaps supervised by Unitrans. Security cameras, network interaction, and easy access by emergency vehicles would provide an experience of safety.

SERVICE: A terminal at the UCD Hyatt hotel or even the Mondavi Center and a terminal at the Amtrak station, the major intermodal focus for Yolo County, define the overall route. Intermediate stops could include Nishi housing, a stop for the new Richards hotel, a stop at city-owned land just east of Richards, and a stop for Lincoln 40 at Hickory Drive. Parking exists or can be made available at every stop, and this will intercept some cars from driving downtown and reduce parking demand there.

FUNDING: Owing to the widespread benefits of this project, and the direct connection to AMTRAK, public funding might be obtained from the federal government [people mover?], the State [SBP] the University and the City.

This expands the idea of what the downtown is, in a healthy way. Let's explore the idea!
